<sup>&</sup>lt;sup>1</sup> Includes PRs and visitors residing in dorms.

<sup>&</sup>lt;sup>2</sup> Breakdown of dorm cases into those detected through surveillance and those isolated before detection is not available before 24 Aug.

<sup>&</sup>lt;sup>3</sup> All of these cases were reported before early Apr, and constitute the first wave of imported cases.

<sup>&</sup>lt;sup>4</sup> Cases who were already quarantined and tested during quarantine to determine their status.

<sup>&</sup>lt;sup>5</sup> Cases who were identified through surveillance testing, such as the bi-weekly Rostered Routine Testing (RRT) of at-risk workers and testing of those with Acute Respiratory Illness (ARI) symptoms.

<sup>&</sup>lt;sup>6</sup> Incidence rates are rounded to two significant figures.

<u>Figure 1.4</u>: Epidemic Curve of Imported Cases by Press Release Date (left panel) and Arrival Date (right panel)

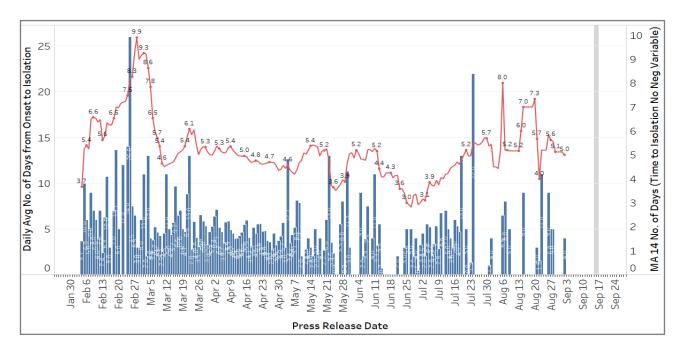

<u>Figure 1.5</u>: Epidemic Curve of Community Cases by Press Release Date (left panel) and by Symptom Onset or Notification Date<sup>7</sup> (right panel)

<sup>&</sup>lt;sup>7</sup> Date of notification was used for cases that did not display any symptoms. The numbers with onset in the past few days may see an increase as more cases are notified.

<u>Figure 1.6</u>: Average Number of Days from Onset of Symptoms to Isolation (QO, hospital admission or notification to MOH) for Community Cases Detected through Surveillance in Each Day<sup>8</sup>

Line represents the 14-day moving average; Bar represents the daily average<sup>9</sup>

<sup>&</sup>lt;sup>8</sup> Area in grey demarcates the data points for the past 3 days where some cases are still pending investigation. The bar chart shows the daily average number of days from onset date to isolation, while the line chart shows the moving average for the past 14 days. Both charts exclude cases with missing onset dates in the computation of the average.

<sup>&</sup>lt;sup>9</sup> Asymptomatic community unlinked cases are not reflected in this chart. Community unlinked cases with symptoms who are isolated on the same day that symptoms occurred would have an isolation time of 0. There are no community cases detected through surveillance who are symptomatic after 2 Sep.
